

# Select Denver Zoo Animal List by Theme

## NORTH AMERICA

North America hosts a diversity of ecosystems and species from the cold Arctic where polar bears thrive to the dry grasslands where rattlesnakes shade themselves from the heat of the day. Our home continent provides animals with a variety of places to live. Some even live in urban settings in our own backyards! In addition to the species Denver Zoo exhibits, many wild animals call the zoo grounds their home!

### *Arranged by Exhibit Area*
